

# Statement of Work

## Team Members and contributions:

### 1) Felipe Garcia –

As team leader my job is to make sure that the team is on track and to help anyone who is not sure what to do. I contributed to the team by finding tutorials online to help facilitate learning Java and XML. I helped create the classes and debug code

### 2) Dana Szapiro -

As GUI designer my job was to create the front-end of the app. The goal was to create something visually pleasing and easy to use so the user would not have a hard time creating the moments. I also made sure that all the buttons did what they were supposed to.

### 3) Eduardo Portet -

I was the Processing Designer. My job was to create the back-end using Java. I made sure when the user wanted to make his or her moment, the camera would appear and that the image would be correctly uploaded into the moment. I checked that the back-end does not crash and tested it to make sure.

### 4) Nancy Castellon -

As the Interface Designer my job was to bring the contributions of the other members and merge it into one functioning app. As each member completed something new code-wise, I made sure it was compatible with what the others had.
